

→ if we want to pass data from VCA to VCB.

① Take a ViewController with navigation controller

② Then define a new class file in the swift

③ goto attribute inspector define the class name and Storyboard ID.

→ take IBAction from button which the button wants to take you to the next VC.

```
@IBAction func addTitleButton(_ sender: UIButton) {  
    let recipesStepsVC = (self.storyboard?.instantiateViewController(identifier: "recipesStepsVC"))! as RecipesStepsViewController  
    self.navigationController?.pushViewController(recipesStepsVC, animated: true)  
}
```

Storyboard ID

→ If there are multiple VC's then

you have multiple storyboard ID's. Instead of getting confused
we define in this way.
